

NUMBER GAMES - 10 TO 20

CBSE, Maths, Class III, Unit - 2

K. Shanmuga Priya

Here are some number games that can be used for this lesson

1. Arrange Number: Divide the class into 3 groups (3 or 4 students in the group) and give plastic cups to them. Students count and arrange the plastic cups from the numbers 0 to 9 within the given time. The group that finishes first wins.

Sing a Song

Shake shake shake, Shake your hands.

Wish wish wish, Wish your friends.

10 10 10 lion lives in a den.

11 11 11 my name is Helen.

12 12 12 I like this jewel.

13 13 13 my age is 13.

14 14 14 India has good fortune.

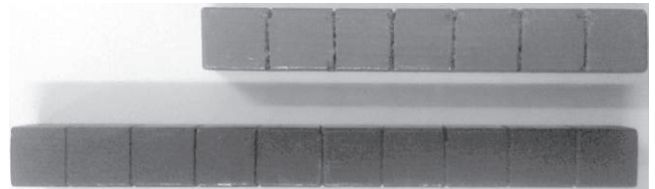

15 15 15 I plant plantain.

Shake shake shake, Shake your hands

2. Number parade: Each student gets a number card (numbers from 0 to 9) that they wear around their neck. Students walk around the class in a random way. When they hear the sound of a whistle, they arrange themselves in the order of the numbers they are wearing.

3. Listen to the song : <https://www.youtube.com/watch?v=wiGEEJLLKd8>

4. Cube Rod: Students use cube rods to form numbers. E.g. If teacher calls out 19, they arrange the rod of 10 and 9 to show the number 19

5. Hit and call: The teacher ask the students to throw a ball at the number chart. This chart shows numbers from 10 to 20. Students have to call out the number hit on the chart.

6. Counter to 10 to 20: Students use the tokens to show numbers from 10 to 20. If teacher says 13 students should arrange a group of tens and 3 ones. By this method students got the knowledge how to group tens and ones.
